2-badge.png)Logical Attendance Tracker 2.0

Includes the ability for the administrator to create multiple templates for letters, including the ability to import a logo, directly within the module. Now you can run the reports and print the letters all in one place.

New, scalable architecture allows Computer Logic Group to update and support customers with consistency – and without the need for individual customizations.

With the ability to create multiple rule-sets at the school level, provide historical tracking of letters sent and create thresholds by term or by date; users can make the students a selection and maintain the consistency of PowerSchool functionality.

PowerSchool®

We have been helping schools by providing training and consulting on Student Information Management Systems [SIMS] for almost a decade. Although we have supported a variety of such systems, over the years, our strongest SIMS expertise is with the Pearson PowerSchool® system.

PowerSchool is a fully integrated, web-based, cross-platform student information system used by thousands of school districts. PowerSchool integrates and automates critical functions including attendance, complex scheduling, classroom grading, and reporting. PowerSchool is especially

 school or programming.
 Focus on the state of California.
 [Signature]

popular with parents since it improves communications among all the stakeholders in a student's education. Since its "Parent Portal" tends to facilitate increased family involvement, PowerSchool tends to be especially popular with charter schools. A single centralized relational database makes district-wide and No Child Left Behind (NCLB) reporting easier. PowerSchool's newest toolset, PowerTeacher™ connects the teacher web portal with a web grade book so that teachers can seamlessly manage grades, students and classrooms.

Several of our firm's technical contributors have PowerSchool expertise. One member of our team is a Pearson-certified PowerSchool Trainer, so we are ready to help your school meet its PowerSchool consulting and training needs. We offer the following services:

- Custom Professional Development (tailored to your school's unique needs)
- Data Import and Export (such as for import to Data Director, for example)
- State Reporting (especially California)
- Implementation Services including Server Configuration
- Custom Object Reports
- Migration from other systems including Pearson's legacy product, SAS!xp

Please contact us for a recommendation and proposal to help you with PowerSchool and all of your student information management needs.

**PowerSchool is a registered trademark of Pearson. Please note: The Miller Institute for Learning with Technology does not own, license or sell PowerSchool. PowerSchool

Print Email

PowerSchool is the most widely used Student Information System in Connecticut. Its student data is the hub of most district systems and the centerpiece of a fast-expanding suite of student-focused integrated applications. Although powerful, it is a complex system to manage and leverage to best meet your district's unique needs.

EASTCONN's expert student information system and programming staff support PowerSchool districts with implementation planning and execution, including the transition to standards-based instruction and reporting; training for administrators, teachers, counseling, office and technical support staff; state and federal reporting compliance; scheduling (including PowerScheduler); customization and report development; and cross-system integration with related applications such as learning management, assessment, food service, transportation, library and communications systems.

In partnership with LEARN, EASTCONN sponsors the Eastern Connecticut PowerSchool User Group, a community of personnel from schools throughout the region, which meets quarterly to share expertise with PowerSchool's family of student data products.

Benefits: Effective use of PowerSchool will help schools meet state student-data compliance requirements. EASTCONN PowerSchool experts can provide "best practice" recommendations so that your staff can more accurately and efficiently use this powerful data collection tool to collect, assess and report student outcomes, and meet state and federal requirements.

For more information about PowerSchool Systems, please contact:

POWER SCHOOL UPCOMING EVENTS

Derro Technical Services

From:  Bob Cornacchioli <bcornacchioli@gmail.com> 5/18/2017 9:54:... 
Subject: Re: PowerSchool Consulting / Work
To:  Milo McMinn

Milo

Thanks for reaching out to me. I specialize in standards and standard based report cards and elementary scheduling.

Most of my work is REMOTE which saves money for you! I live in New England. I do not specialize in state reporting.

I know that working with state data reporting is a very time consuming as each state has specific rules for reporting. Level Data has been working in over 25 states (I'm not sure if New Mexico has been one of them) and their real time validation subscription service is getting rave reviews by all the districts who have implemented it. It identifies potential errors in state reporting at the data entry point by your users. This is a wonderful service, I will check with them let you know if they are in New Mexico yet. Level Data doesn't do state reporting either but their service certainly makes the remaining work much more manageable.

You can reach out to Al Oliver (aoliver@leveldata.com) or simply reply to me asking for me to introduce you to the Level Data team.

As for assistance onsite with New Mexico state reporting, I'd reach out to neighboring towns or a state list serv to see if someone local might be able to assist you!

If you ever need assistance in standards, let me know and we can chat!

Bob Cornacchioli,

I came across your website when looking for PowerSchool Consultants to help out for next school year. I was wondering if you do any long term/Full year onsite consulting and work on powerschool for state/federal reporting? My district is located in Northern New Mexico. If so, is there an hourly cost that you would be open too. If you cannot do onsite, what would be a off site distance cost hourly for your services? Thank you for your time and any information that you can send my way.

Milo McMinn

PowerSchool Help

PowerSchool

We are PowerSchool experts. We have years of experience helping schools which, often times challenged by resources, don't have dedicated Student Information System (SIS) professionals on their staff. We can fill that gap and provide you with the PowerSchool

help that you need.

Our experience and insight can provide you with a more flexible system and reduce the frustration and time you spend managing your SIS. We have expertise not only in "traditional school" system configurations, but also:

- Full or temporary independent study
- Elementary schools scheduled by cohorts with rotating teachers
- High Schools with multiple terms, rotating bells schedules (A day, B day, etc), and students simultaneously enrolled in college courses
- Standards-based scheduling and reporting (Including Common Core)

PowerSchool Reports

From Report Cards and Transcripts to Attendance Reports and Student Information Handouts, we have you covered. We have experts that can choose the best reporting solution for your goals. We can help you to manage:

- Quick Exports
- Object Reports
- ReportWorks
- Reporting Engine
- DDE/DDA Extractions and External Reports
- Other Custom Reports

Would cost \$1500 a day for outside
services locally. may not be able to
provide services that fit our needs.*

New Schools

If you are a brand new school or just new to PowerSchool, we can walk you through that first year to transfer the knowledge of best practices for using the system for years to come. In our experience, the earlier we develop good processes and data quality safeguards, the better.

Some examples include:

- A full review of PowerSchool options and requirements
- Defining roles and responsibilities
- Process mapping and documentation
- Legacy information validation
- Custom template creation

- Addition of new schools to existing servers
- Initial administrator and teacher training

Existing Schools

If you are an existing or expanding school and want to brush up on any of these areas, contact us. We work with many modules and have implemented PowerSchool for many different solution areas, so let us know and we can create a plan that delivers the help you need.

Advanced Customization

Are you finding it difficult to fit into the PowerSchool mold? Many schools do. Our years of experience working with unique Schools, along with our creative nature, can help maximize your system through customization. If customization is not the option, we can help you analyze alternative solutions to achieve your goal.

If the customization required is supported by PowerSchool, we can handle it!

Some examples include:

- Custom screens
- Reports
- Scheduling conflicts
- Enrollment screens

There is no perfect system out there, but we can help you push the limits on the one you have so that *it* works for you, not the other way around.

Keys to Ownership Services

Drive Your Success using PowerSchool

Keys to Ownership Services

Adopting a new SIS and keeping functionality relevant for users ongoing can be challenging for both large and small districts. To help, we offer Keys to Ownership (KTO) services, a highly variable and flexible consulting solution designed for your unique PowerSchool needs.

KTOs are sold as customized, 10 remote hour packages, focused on the topics that are most important and needed by PowerSchool administrators.

Designed for customers at any stage in their life-cycle of PowerSchool adoption, you will be assigned an expert PowerSchool consultant who will assist you during your first year of deployment or provide a helping hand if you have been using PowerSchool for years. You drive what hours are used for, at your own pace. KTOs assist you in two primary areas: PowerSchool **functionality** and **completing tasks**.

PowerSchool Functionality

Our consultants will help you take full advantage of PowerSchool functionality, helping you plan and find the optimal approaches to resolving your user needs through hands on, direct engagement centered on your district or school goals and needs. An expert from our PowerSchool service team will help you configure and use important PowerSchool features and functions that go beyond standard implementation. Our services save you time and reduce stress, while helping you maximize PowerSchool old and brand new features. We can help you speed up the planning and provide productive execution to go live with your solutions faster, with confidence.

Examples of focused topics:

- Parent Portal setup and roll out
- Standards setup and importing
- Test score setup and importing
- PowerLunch setup and deployment
- Incident Management setup
- Honor roll setup
- Graduation Planner
- Attendance tracking and notification
- Health Management setup and immunization data
- New school setup and data
- Setting up summer school
- Document attachments and categories
- Repeated course grade suppression
- Localization administration (Language Toolkit)
- Database extensions
- Security, roles, and field-level security

Completing Tasks

PowerSchool KTO services can help you complete important PowerSchool administration work, when it becomes difficult to fit in or spin up on quickly. With the help of a PowerSchool expert, complete critical tasks more easily or choose to supplement your labor constraints by having our team take on the bulk of the work involved. KTO services save time, ensure accuracy, and help you learn best practices, so you can manage tasks better on your own going forward.

Regularly Occurring Tasks:

- End-of-term readiness and completion
- End-of-year readiness and completion
- Next-year setup
- Report card readiness review

Additional Tasks:

- Data audits and validation reports
- Using Data Import/Export Manager
- Troubleshooting GPA issues
- Adding/removing calendar days
- Using DDA/DDE to extract and fix data; to make bulk changes
- State compliance submission planning and readiness
- Attendance audits and adjustments for start of new year
- Importing customizations and reports from other sources
- Reviewing system reports for accuracy
- Using photo management
- Search strategies and methods when using data

Customers are choosing to purchase 2-4 KTO bundles yearly, so they have that planned helping hand when they need it or to take the weight off for planned deployments and new feature releases.

Design your own KTO services bundle based on the needs of your school or district. Work with your PowerSchool sales representative to determine how many KTO packages you need, or discuss how to target certain topics within PowerSchool.
